Intro to Articles

Articles are a fast way to expand your tech knowledge.

The goal is to share deep **technical knowledge** on **specific topics**. Articles are not commentary or opinion pieces.

Featured Articles are Appeon's recommendations for you. To see all the Articles, select a category below.

Easily find what **type** of technical Article it is and the **product** it relates to in the **Details** section.

Tags are so everyone can easily find your article

You can also select from a list of tags…

Click on any tag to see the articles with that tag…

Add keyword **tags** that are relevant to your article so others can **easily understand** what your article is about. You can add as many tags as you need that will better **help identify** key topics related to your article.
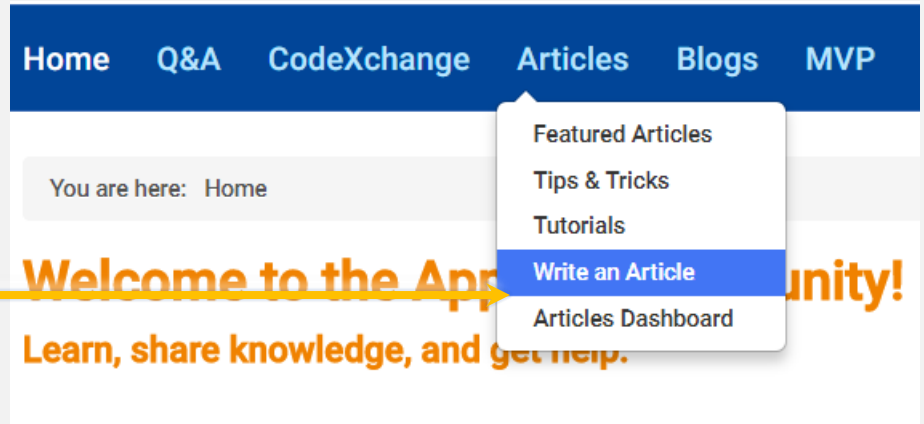

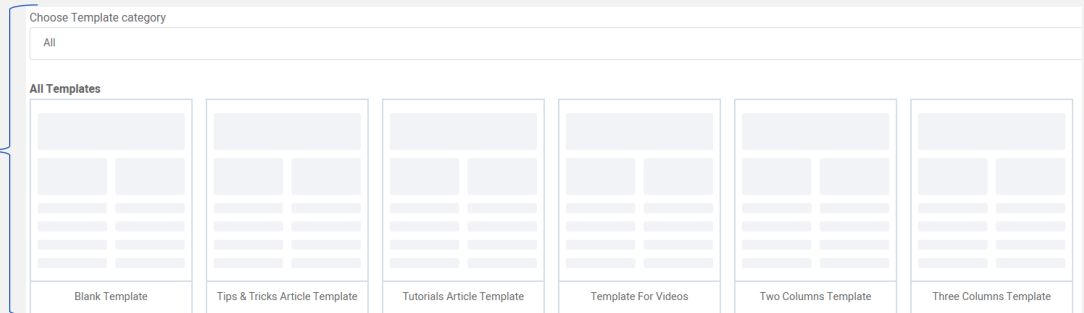

Write articles easily with our templates and tools!

Write an article in a matter of **minutes** without any fuss.

B I U S   Formats Paragraph Tahoma 9pt

Komento Disable   Komento Lock   Page Break   Read More
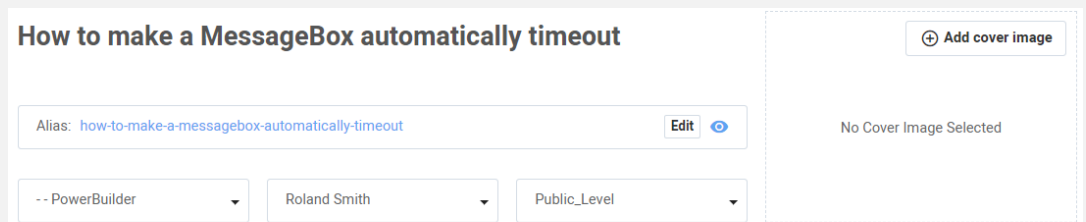

The "Read More" place holder will **appear** in the **editor** like this...

I was wondering if it was possible to have a MessageBox that could automatically close after a set period of time so I did some searching and found that you can!

In Windows XP, Microsoft added a function MessageBoxTimeout but didn't document it. The normal MessageBox function was changed to call MessageBoxTimeout passing the maximum value for the timeout. The maximum timeout value equates to about 49 days.

I developed a code example that uses the MessageBoxTimeout function. The function arguments/returns are patterned after the built in MessageBox function. My code translates the Icon and Button arguments to the values the API function expects.
